ECO NATURE FRIENDLY

WOODEN

windows &
doors

Our wooden windows and doors are made of natural wood. All materials used in processing are environmentally friendly, preserve the properties of wood and are absolutely harmless. Our products can be used in hospitals, kindergartens, private homes and apartments with little children and pets even.

Wooden windows IV68

These Windows are offered with single-chamber double-glazed Windows (24 mm, 30 mm). The coefficient of thermal conductivity for such a double-glazed window $U_g=1,1 \text{ W}/(\text{K}^*\text{m}^2)$. The thermal conductivity coefficient for the assembled product U_w ranges from 1.3-1.5, depending on the shape and size of the window.

Wooden windows IV78, 90

Windows with IV78 & IV90 profiles are already offered with double-glazed Windows, 40mm and 52mm thick, respectively. The coefficient of thermal conductivity for a 40mm double-glazed window $U_g=0.6 \text{ W}/(\text{K}^*\text{m}^2)$. The thermal conductivity coefficient for the UW Assembly is from 1.1-1.3 the thermal conductivity Coefficient for 52mm is $U_g=0.6 \text{ W}/(\text{K}^*\text{m}^2)$, and the thermal conductivity coefficient for the UW Assembly is 0.9-1.1.

Wooden construction elements with aluminum covers

To protect and finish wooden surfaces, we use not only high-quality paint systems, but also offer to cover the street exterior of our structures with aluminum profiles of the Holz Plus system of the German company BUG.

Wooden entrance doors and terraces

Our wooden doors are distinguished by their refinement, unique reliability, comfortable and long service life. Fittings and locks are used only from the best European manufacturers and have improved quality characteristics. All profile systems have sealing contours on the threshold, door leaf and doors box, and the multi-point lock is a solid response bar with a high clamping force, which provides increased thermal insulation and a high level of noise protection.

Environmental friendliness, quality, naturalness of the materials used and proximity to nature - these are the main criteria for the manufacture of our products!

Windows and doors made of natural wood are resistant to temperature changes, provide an excellent level of thermal insulation, long service life and impeccable appearance.

High-quality and stylish accessories will emphasize the individuality of our wood products and add convenience to use.

Multifunctional accessories of the German brand ROTO increase the convenience and reliability of windows.

A variety of color solutions implemented with environmentally friendly paints German company Remmers and Finnish company Teknos.

The Union of technology and nature!
